
Homerton University Hospital, London, UK

Background

Homerton is an NHS Foundation Trust based in the east London Borough of Hackney, providing general hospital and community services to Hackney and the City of London, and specialist care in obstetrics, neonatology, fetal medicine, fertility, bariatric surgery and neurorehabilitation across east London and beyond.

Installation

During the renovation of a specialist Adult Rehabilitation Unit at the hospital, Antimicrobial Copper door furniture was installed throughout. The products chosen were from Allgood's Contego range of Antimicrobial Copper door furniture, made from an alloy with a silver appearance, visually indistinguishable from stainless steel, providing an unobtrusive additional infection prevention measure.

The items, supplied in a brushed finish, were:

- ◆ Lever handles
- ◆ Pull handles

Graham Shirville, Managing Director of Allgood, says of the installation:

'The Contego range offered the client the antimicrobial protection of copper with the appearance of stainless steel, fitting in with the desired aesthetic whilst helping to protect patients from the pathogens that cause healthcare-associated infections.'
