Antimicrobial Copper is the most effective touch surface material in the fight against pathogenic microbes, killing greater than 99.9% of bacteria within two hours of exposure. No other material comes close.

The Antimicrobial Copper Service Mark (logo) and Certification Mark (Cu+) are used by leading material suppliers, designers, specifiers and manufacturers of components and systems, to indicate their products and services employ Antimicrobial Copper.

The use of the Antimicrobial Copper Marks by an organisation indicates permission to do so has been granted on behalf of International Copper Association, Ltd, based upon adherence to strict usage rules. These rules guide that organisation's understanding of the underlying technology and the way they promote, advise and deploy it in line with existing research, regulatory and legislative requirements.
